

Captor - X

eng11111R4
PATENT PEND.

Close and fasten it, then no one can escape!

It' s done ONLY by aiming at the target' s arms or legs with Captor-X!

JUST press a trigger on its grip
It' s done ONLY by aiming at
target' s arms or legs with
Captor-X!

Holding a target with Captor-X is safely and easily done by pressing a trigger button. It is extremely difficult to escape from it and also to run after you. Captor-X is a unique and brand-new product that holds target' s arms or legs to stop him from moving.

To open Captor-X, you need to push in the bottom of the grip into Captor-X (Notice: it can not be opened when the jaw is locked). Once you hold the target with Captor-X' s jaw, fasten it up by pulling at its bottom. To lock the jaw, rotate the lock located at its grip. Please be sure to unlock it after use.

Just only one Captor-X can hold a target and stop his move, but we recommend using it with either a Japanese catch pole or more than one Captor-X at the same time.

Preferred size (length at the jaw' s opened. **NOTE:** Size may be changed without any notice.)

for arms and legs	ECX101-S 1step	ECX102-L 1step	ECX201-M 2step	ECX202-L 2step
